

Overview

In this assignment you will be writing a tool to help you play the word puzzle game [AlphaBear](#) ^α. In the game, certain letters must be used at each round or else they will turn into rocks! Therefore, we want to create a tool that you can provide with a list of letters you **MUST** use and a list of available letters and the program returns a list of all the words that contain required letters and only contain available letters. Here is a video of someone playing the game without the help of the program. Note how red letters turn to rocks if not used

[Alphabear Is The Best](#) ^α
